

Project Self-Evaluation

Name student + Group:

Jay Ahne, Shrimp Council

Competency Project-based working

The student adeptly contributes to a positive, collaborative, and innovative team environment, demonstrating effective time management, professional communication, creative thinking, a solution-oriented mindset and adaptability, ensuring quality assurance in project execution.

Procedure:

1. Fill in the self-evaluation
2. Evaluate, reflect and set goals
 - Analyse the peer feedback you received and write a summary.
 - Compare the summary with your self-evaluation and reflection.
 - Based on your reflection, draw your conclusions.
 - Based on your conclusions, set goals for the future.

s1. Self-evaluation:

Proactive team collaboration

I recognise myself in the following statements:

- ☐ I showed leadership
- ☒ I took ownership of tasks
- ☒ I completed the agreed work with attention to quality
- ☒ I actively helped the group when problems occurred
- ☐ I was consistently highly productive
- ☐ I avoided responsibility or needed frequent reminders

Reflection: I could have done with giving more input in the team in general and I did have some bad days where I felt I got very little done (even though some people said otherwise for some reason)

I think in the end I did pull my weight with making the characters and UI art and grabbed tasks when other people needed the help.

Planning & Reliability

I recognise myself in the following statements:

- ☐ I properly used project planning tools
- ☐ I helped the team keep track of deadlines
- ☐ I consistently met the deadlines
- ☐ I set realistic priorities and scope
- ☐ I communicated early when deadlines were at risk
- ☐ I caused delays without clear communication

Reflection: We adapted when specifically I couldn't do the original plan of joining Dennis and Daphne with making rooms, because they were done around the second week, but I wasn't with the UI, so instead Daphne joined me.

I found that really nice to have a second person helping me after I notified the group that there was way more UI than we initially thought.

Collaboration & Communication

I recognise myself in the following statements:

- ☐ I was present, focused, and prepared for meetings
- ☐ I listened actively to others
- ☐ I responded to others in a respectful and appropriate way
- ☐ I did address communication issues/conflicts
- ☐ I created space for others to speak or take responsibility
- ☐ I was on time for meetings and present to deliberate
- ☐ I dominated discussions or distracted the group

Reflection: I was actually the person to come up with at least the idea for the rats and we built off of that and when things weren't doable I was able to kill those ideas.

Learning Attitude

I recognise myself in the following statements:

- ☐ I was open to feedback
- ☐ I reflected on my own behaviour or decisions
- ☐ I adjusted my approach during the project
- ☐ I repeated the same issues without reflection

Reflection: Eden at some point mentioned that I was impulsive to do things instead of asking first, so I tried to do better on that, I don't know if I failed at that or not (I hope I did, because I think I upset some people with that a bit (at least temporarily)).

I also had some ideas that differed from what other people had in mind and I didn't get my way with that and that was alright.

2. Analyse Peer feedback

Summarise what you noticed across the peer feedback you received.

- What feedback appeared multiple times?
 - That I have good leadership
- What surprised you?
 - That I have good leadership
 - It was also mentioned that I crunched again this project (didn't feel like that to me)
- Where do peers see strengths or risks?
 - They see strengths in my work quality and quantity
 - Because of this they also see the risk of me overworking myself

Reflection

Compare your self-assessment with the peer feedback.

- Where do they align?
 - In the planning and reliability and in the communication
- Where do they differ?
 - In the learning and collaboration
- What does this tell you about your behaviour or blind spots?
 - This tells me I need to stay open to feedback, learning to communicate and that my behaviour can be nice to be around, but I can also be a bit too much

Conclusion

Based on your reflection, draw your conclusions.

What are your main takeaways from this project about how you work in a team?

Even if I try to be more of a following person I somehow still end up in a more leading role, which is fine, because the people I worked with like my leading style.

My energy is nice to have around and brings life into the working space, but sometimes people need more thinking and less impulsiveness.

Learning goals

Formulate concrete, behavioural goals.

I want to become less impulsive when I set my mind to something and think/ask first.

I want to learn to be able to let go of the wheel sometimes so that I don't grab all the tasks and start crunching myself into overworking.
